	29		88	119	149	180	210	241	272	302	333	363		394		453	484	514	545	575	606	637	667	698	728
	30		89	120	150	181	211	242	273	303	334	364		395		454	485	515	546	576	607	638	668	699	729
	31		90		151		212	243		304		365		396		455		516		577	608		669		730

For leap year, add 1 day to all dates after February 29. Example, March 1, 1996 is day 61 rather than day 60.

Age, Calving Interval and Gestation Table

Dr. Larry W. Olson - Extension Animal Scientist

The [Age, Calving Interval and Gestation Table](#) is useful for calculating a calf's age, a cow's calving interval, a cow's expected calving date and a cow's breeding date. The following are examples of how to use the table:

Calf Age

- Weaning Date = July 1, 1996 = Day 547 + 1 for leap year = Day 548
- Birth Date = November 15, 1995 = Day 319
- Calf's Weaning Age = 548 - 319 = 229 days-old

Cow's Calving Interval

- 1996 Calving Date = March 5, 1996 = Day 429 + 1 for leap year = Day 430
- 1995 Calving Date = January 25, 1995 = Day 25
- Cow's Calving Interval = 430 - 25 = 405 days

Cow's Expected Calving Date

- 1995 Breeding Date = February 10, 1995 = Day 41
- Average Gestation Length for Cow's Breed = 283 days
- Cow's Expected Calving Date = 41 + 283 = Day 324 = November 20, 1995

Cow's Breeding Date

- Average Gestation Length for Cow's Breed = 283 days
- Cow's Breeding Date = 430 - 283 = Day 147 = May 27, 1995
